

BLOW MOLDED PALLET WITH WAVE-LIKE SUPPORTS

ABSTRACT

A pallet system has a pallet body that includes a first portion with an outer surface and an inner surface that has at least a portion distant from the outer surface and a
5 corrugating form. The pallet body also includes a second portion with an outer surface and an inner surface that has at least a portion distant from the outer surface and a corrugating form. The inner surface of the first portion is connected to the inner surface of the second portion between each respective corrugating form. Channels and protrusions may also be used to add strength and support to the body. The portions are connected at tack off points.
